PROFESSIONAL EXPERIENCE

04/2025 – 07/2025 Adelaide	Data Analyst Intern <i>Youth Options - An NDIS non-profit provider for youth employment and support.</i> - Designed and implemented Power BI dashboards, utilizing SQL for KPI analysis, reducing administrative time by 10% through data-driven decision-making. - Ensured data quality and accuracy by using Python and Google Sheet to extract, transform, and store data. - Performed data validation and process analysis on CRM systems to ensure data integrity and compliance with NDIS service standards. - Executed process analysis and data validation on CRM systems, improving data quality and increasing referral conversion rates.
02/2024 – 05/2024 Adelaide	Professional Project Consultant <i>All Altitudes - Professional drone services and aerial data solutions provider in Adelaide.</i> - Facilitated cross-functional workshops to align data definitions and reporting metrics, which substantially reduced project rework by 15%. - Built dashboards, reporting and visualisations, to provide insights and make recommendations. - Led a critical data alignment project, ensuring the consistent and accurate flow of information across internal systems for reporting.
06/2022 – 09/2022 Vietnam	Sales Analyst <i>One Line Viet Nam - Global logistics and freight forwarding service provider.</i> - Performed detailed sales data analysis by querying key transactional data using SQL. - Implemented rudimentary visualization of logistics data, which informed routing efficiencies and resulted in improved delivery times by 5%. - Managed client data and relationships, maintaining over 90% client satisfaction and leveraging data insights to close substantial deals.

EDUCATION

2023 – 2024 Adelaide	International Master of Business Administration (Business Analytics) <i>University of South Australia</i> - International Merit Scholarship - Spearheaded three major group projects, including a TikTok strategy analysis that resulted in the development of new content management strategies, leading to a 10% reduction in average time spent. - Achieved a Distinction in Data Privacy, Governance, and Quality for Business Professionals and Machine Learning for Business Professionals.
2018 – 2022 Vietnam	Bachelor of Logistics <i>University of Transportation and Communications</i>

KEY SKILL

Data Visualisation Power BI, Tableau	Programing Languages SQL, Python
Cloud Data Warehouses Snowflake, Databricks, Microsoft Fabric	Database SQL Server, Oracle
AI/Automation Agentic Workflow Design, Workflow Orchestration	Transferable skills Microsoft Excel, CRM Data Management, Record Keeping, Process Optimization

PERSONAL PROJECTS

Retail Supply Chain Analytics (Python + SQL + PowerBI)

- Engineered an end-to-end exploratory data analysis pipeline in **Python (Pandas, Matplotlib)** on a retail supply chain dataset of ~10,000 transactions and \$2.3M in sales, uncovering a stark profitability gap.
- Leveraged **Claude AI** to accelerate pattern recognition and insight synthesis across 4 regions and 3 customer segments, pinpointing that the Tables sub-category alone generated a **\$17,700 loss** and an 8% return rate was concentrated in specific low-margin product lines.
- Delivered actionable findings on sales performance and supply chain optimisation, revealing patterns across 4 U.S. regions and 3 customer segments (Consumer, Corporate, Home Office), with insights informing discount strategy and inventory prioritisation to improve margin outcomes.

Bike Sales Exploration (SQL) [🔗](#)

- Structured a large transactional dataset by building a robust star schema, ensuring the dataset was ready to support complex relational querying and analysis.
- Analyzed key business dimensions—including customer regional concentration and purchasing frequency—and highlighted high-performing stores based on their revenue contribution.
- Delivered core analytical insights that directly support data-driven decisions for marketing, inventory management, and operational improvements.

Sales Marketing Analysis (Power BI, Excel) [🔗](#)

- Developed a dynamic **Power BI** dashboard to track **\$230M** in revenue and retail KPIs across stores and categories.
- Analyzed sales and order data to pinpoint high-performing malls and top categories for strategic investment.
- Modeled customer engagement by age segment and weekday, informing data-driven strategies for targeted marketing and promotional timing.

Pizza Business Dashboard (PowerBI) [🔗](#)

- Analyzed total revenue and order volume to isolate peak daily and weekly performance times, which directly informed optimal staff scheduling and operational efficiency.
- Identified top menu contributors by category and high-volume ingredients, supporting inventory optimization and cost-risk mitigation.
- Modeled pricing elasticity and found a strong negative correlation between price and sales volume.

CERTIFICATES

- Python (Basic) - HackerRank [🔗](#)
- Tata - Data Visualisation: Empowering Business with Effective Insights Job Simulation [🔗](#)
- Deloitte Australia - Data Analytics Job Simulation [🔗](#)
